

Gigabyte Z390 DESIGNARE: OpenCore-EFI-Ordner und Anleitung

Beitrag von „teomi62“ vom 26. Mai 2020, 15:52

Hi everyone, with hardware in signature I would need some help, I moved my m. 2 from M2M to M2P to recover a sata port, my boot loader is OC 0.5.9, before the move everything is ok, now at startup I no longer select the correct boot disk and not even in: "system / disk preferences boot ". someone knows how to give me advice.

Thanks in advance.

Teo
