

Intel Wi-Fi: es wird spannend!

Beitrag von „Sascha_77“ vom 13. Juni 2020, 11:57

[apfel-baum](#)

Hier die ganze Syntax fürs Terminal für Catalina:

Code

1. `xcodebuild -configuration Release -scheme fwgen build`
2. `xcodebuild -configuration Release -scheme fw_genx build`
3. `xcodebuild -configuration Release -scheme itl80211 build`
`CONFIGURATION_BUILD_DIR=build`
4. `xcodebuild -configuration Release -scheme itlwm build -sdk macosx10.15`
`CONFIGURATION_BUILD_DIR=build`
5. `xcodebuild -configuration Release -scheme itlwmx build -sdk macosx10.15`
`CONFIGURATION_BUILD_DIR=build`

Das hier ist optional. Dann braucht man nicht in Derived Data rumkramen.

Code

1. `CONFIGURATION_BUILD_DIR=/der/zielpfad`
