

MSR Unlock/Cascade Lake Refresh Firmware Fix

Beitrag von „DSM2“ vom 19. Juli 2020, 00:05

The stop? I don't understand what you mean.

All I can definitely tell is that it works without any issues here.

You also use a sage 10g and flashed the firmware after modification with UEFIPatch via Flashback function?

The modified Bios without the SSDT brings nothing as well as the SSDT without the modified Bios.
