

[Sammelthread] MacOS BigSur 11.0 DEV-Beta Erfahrungen

Beitrag von „DSM2“ vom 30. Juli 2020, 19:34

Bitteschön, schaut her...

manfredm1970 [karacho](#) [grecedrummer](#)

The image shows two screenshots from a Hackintosh system. The top screenshot displays the 'Kexts' folder in a file manager, listing various kernel extensions such as AppleALC.kext, Lilu.kext, SMCProcessor.kext, SMCSuperIO.kext, USBPorts.kext, VirtualSMC.kext, and WhateverGreen.kext. The bottom screenshot shows the 'NVRAM' settings window in Hackintool v3.4.4, displaying a list of properties and their values:

Name	Wert
SystemAudioVolume	<+85>
bluetoothInternalControllerInfo	<+8823w05 00000000 63748863 d96d48E2>
bluetoothInternalControllerInfo	<+8823w05 00000074 88638F8a 548E>
boot-args	-
csr-active-config	<00000000>
prev-lang:kbd	<+8E16342 69F6B20 507287>
run-efi-updater	<+8A832484 453A33>
run-efi-updater	<+4e70D>

Below the table, there is a 'Variable Value' section which is currently empty. The window also includes a 'Text automatisch synchronisieren' checkbox and a 'Text synchronisieren' button.
