

OpenCore Sammelthread (Hilfe und Diskussion)

Beitrag von „RealZac“ vom 16. August 2020, 17:13

Habe ich doch schon gepostet. 😊

Nachtrag: Option "status" gibt's bei trimforce leider nicht.

A screenshot of a macOS terminal window. The window has a title bar with red, yellow, and green window control buttons. The terminal text shows a login message, a command to run 'trimforce status', an error message 'Invalid argument (error 22)', and the usage instructions for the 'trimforce' command.

```
Last login: Sun Aug 16 17:34:53 on console
[RealZac@ZacMac ~ % trimforce status
trimforce: Invalid argument (error 22)
[RealZac@ZacMac ~ % trimforce
Usage:
    trimforce enable
    trimforce disable
    trimforce help
RealZac@ZacMac ~ %
```
