Kompatibler Intel Wi-Fi AX201 funktioniert mit itlwm.kext

Gen 2

PCI ID	Device Name	Supported
0x2723	AX200	Yes
0x2720	AX201	Yes
0x43F0	AX201	Yes
0xA0F0	AX201	Yes
0x34F0	AX201	Yes
0x02F0	AC 9462	Yes
0x3DF0	AC 9462	Yes
0x06F0	AX201	Yes

2.5GbE LAN

PciRoot(0x0)/Pci(0x1C,0x1)/Pci(0x0,0x0)

This entry relates to Intel's i225-V 2.5GbE controller found on higher end Comet Lake boards. what we'll be doing here is tricking Apple's i225LM driver into supporting our i225-V network controller:

Key	Type	Value
device-id	Data	F2150000

- Note: If your board didn't ship with the Intel i225 NIC, there's no reason to add this entry.
- Note 2: If you get a kernel panic on i210 kext, your Ethernet's path is likely

PciRoot(0x0)/Pci(0x1C,0x4)/Pci(0x0,0x0)

TB3 Karte in den unteren Slot über PCH und fertig.
