

# OC DELL Latitude E6420

**Beitrag von „Mo-6420“ vom 23. Januar 2021, 20:34**

Hi,

First, Sorry for the late.

Second, trust me, it's easy and I believe in you.

Install any macOS: high Sierra, Mojave or Catalina, with your own EFI (clover for example).  
Creat through it a partition 1Gb or 2 as you like but with MS-FAT. Put the EFI OC in it.

prepare your USB macOS Big Sur and reboot your Pc

then Enter with the MS-FAT partition where we put OC EFI

and you'll see the begin of install

Good luck

Here some pict. sorry they are not in order...

after creat MS-FAT partition and reboot your PC: what you should do in your Bios PC to enter  
through OC EFI folder
