

Big Sur 11.1 mit opencore - USB audio device (presonus studio 1824c) ruckelt immer dann, wenn etwas passiert (z.B. Programm öffnen)

Beitrag von „dschaek“ vom 30. Januar 2021, 15:05

Hey [juantrix](#) ,

I use the attached USBMap, which was made with Hackintool. Do you think its well configured?

It didn't help with the audio issue from the external audio device.

Could it have to do something with the SSDT-RTC0-RANGE-HEDT.aml. (prebuilt)

When I boot my Catalina installation (which is configured with clover) with the OpenCore efi from the ssd from above, I don't need this ssdt, and the device works well.

However, for booting Big Sur it is necessary.

I am currently using BIOS 1201. I did try with bios 3303 - still the same issue.
