Natives Thunderbolt3 an jedem Rechner

Beitrag von „apfelnico“ vom 11. Februar 2021, 23:17

[juantrix](#)

The SSDT and the paths it contains look good. There must be another reason. The external method "DTGP" is referred to in the header of the SSDT. Does this method exist in another SSDT or DSDT? If not, it won't work.

If not, you can insert this method directly into the SSDT:

Code

```
1. Method (DTGP, 5, NotSerialized)
2. {
3. If ((Arg0 == ToUUID ("a0b5b7c6-1318-441c-b0c9-fe695eaf949b")))
4. {
5. If ((Arg1 == One))
6. {
7. If ((Arg2 == Zero))
8. {
9. Arg4 = Buffer (One)
10. {
11. 0x03 // .
12. }
13. Return (One)
14. }
15.
16. If ((Arg2 == One))
17. {
18. Return (One)
19. }
20. }
21. }
22.
23. Arg4 = Buffer (One)
24. {
25. 0x00 // .
```

- 26. }
- 27. Return (Zero)
- 28. }

Then remove the external link in the header.
