{Gelöst} Installer hängt bei jeder Menge ++++ Zeichen (ASRock B75M-DSG)

Beitrag von „al6042“ vom 21. März 2021, 23:49

Hi Tarek and Welcome to the forum... 😊

Please do not use any [distro](#), since we do not support the usage of those.

Try to create a macOS install-Stick with available Vanilla instructions... since we do not have international versions in our forum you should use a search engine of your choosing to find that with ease.

Also be aware of the fact that with your current graphics card you can only install macOS High Sierra 10.13.6 as the latest version, because the necessary Nvidia WebDrivers are not supported on newer macOS releases.

Also please add your hardware details either in your signature or your profile, within the section "About me".

Do not forget to mention the name of your bootloader, since this will help in later posts.
