

FaceTime Apple ID geht nicht

Beitrag von „Heiko77“ vom 25. März 2021, 16:51

Auch das mal gemacht ?

Clean out old attempts

This is important for those who've tried setting up iMessage but failed, to start make sure your NVRAM has been cleared. You can enable the option in the boot picker in your config under config.plist -> Misc -> Security -> AllowNvramReset.

Next open terminal and run the following:

Code

1. bash
2. sudo rm -rf ~/Library/Caches/com.apple.iCloudHelper*
3. sudo rm -rf ~/Library/Caches/com.apple.Messages*
4. sudo rm -rf ~/Library/Caches/com.apple.imfoundation.IMRemoteURLConnectionAgent*
5. sudo rm -rf ~/Library/Preferences/com.apple.iChat*
6. sudo rm -rf ~/Library/Preferences/com.apple.icloud*
7. sudo rm -rf ~/Library/Preferences/com.apple.imagent*
8. sudo rm -rf ~/Library/Preferences/com.apple.imessage*
9. sudo rm -rf ~/Library/Preferences/com.apple.imservice*
10. sudo rm -rf ~/Library/Preferences/com.apple.ids.service*
11. sudo rm -rf ~/Library/Preferences/com.apple.madrid.plist*
12. sudo rm -rf ~/Library/Preferences/com.apple.imessage.bag.plist*
13. sudo rm -rf ~/Library/Preferences/com.apple.identityserviced*
14. sudo rm -rf ~/Library/Preferences/com.apple.ids.service*
15. sudo rm -rf ~/Library/Preferences/com.apple.security*
16. sudo rm -rf ~/Library/Messages

Alles anzeigen

- Remove all devices from your AppleID: [Manage your devices](#)
[\(opens new window\)](#)
- Enable 2 Factor-Auth
- Remove all iServices from Keychain, some examples:

Code

1. ids: identity-rsa-key-pair-signature-v1
2. ids: identity-rsa-private-key
3. ids: identity-rsa-public-key
4. ids: message-protection-key
5. ids: message-protection-public-data-registered
6. ids: personal-public-key-cache
7. iMessage Encryption Key
8. iMessage Signing Key
9. com.apple.facetime: registrationV1
10. etc ...
