

iGpu oder dGpu? (Nvidia)

Beitrag von „Bob-Schmu“ vom 12. Mai 2021, 11:34

Dann kauf dir eine GT710 <https://geizhals.de/msi-geforc...00r-a1386039.html?hloc=de> + Video Splitter <https://geizhals.de/delock-hdm...749-a1880923.html?hloc=de> passende Kabel und die GTX960 über OpenCore für macOS deaktivieren.

DeviceProperties Method

Here is quite simple, find the PCI route with `pfutil` and then create a new DeviceProperties section with your spoof:

```
sudo pfutil -drw /
```

And the output will result in something similar:

```
DevicePath = PciRoot(0x0)/Pci(0x1,0x0)/Pci(0x0,0x0)/Pci(0x0,0x0)/Pci(0x0,0x0)
```

With this, navigate towards `Root -> DeviceProperties -> Add` and add your PCI route with the following properties:

Key	Type	Value
name	data	2364837306C8179
ICName	string	#display
class-code	data	00000000
