

# Can not boot after copy EFI to disk

**Beitrag von „bluebyte“ vom 12. September 2021, 06:18**

You are using Mac OS and Windows as Dual-Boot-System on the same disk? This isn't a good idea, because you can get some Boot-Problems.

It's much more better, when you install every system on a separate disk. Show a Screenshot of your partitions and volumes.
