

# OC update von 0.7.1 auf OC 0.7.4 Problem

Beitrag von „OSX-Einsteiger“ vom 26. September 2021, 17:17

Denn hier brauchst du

| Quirks                  | dict       |
|-------------------------|------------|
| AppleCpuPmCfgLock       | bool false |
| AppleXcpmCfgLock        | bool false |
| AppleXcpmExtraMars      | bool false |
| AppleXcpmForceBoost     | bool false |
| CustomSMBIOSGuid        | bool true  |
| DisableIoMapper         | bool false |
| DisableLinkitJettison   | bool true  |
| DisableRtcChecksum      | bool false |
| ExtendBTFeatureFlags    | bool false |
| ExternalDiskIcons       | bool false |
| ForceSecureBootScheme   | bool false |
| IncreasePciBarSize      | bool false |
| LapicKernelPanic        | bool false |
| LegacyCommpage          | bool false |
| PanicNoKextDump         | bool true  |
| PowerTimeoutKernelPanic | bool true  |
| ProvideCurrentCpuInfo   | bool true  |
| SetApfsTrimTimeout      | integer -1 |
| ThirdPartyDrives        | bool false |
| XhciPortLimit           | bool false |
