FileVault ist **kein** set it and forget it feature:

Zitat

Vault [...]

Basic — require **vault.plist** file present in OC directory. This provides basic filesystem integrity verification

and may protect from unintentional filesystem corruption.

Secure — require **vault.sig** signature file for **vault.plist** in OC directory. This includes Basic integrity

checking but also attempts to build a trusted bootchain.

Alles anzeigen

Man muss die Tool unter "CreateVault" benutzen, um FileVault einzurichten.
