"Der neue Weg" macOS zu nutzen oder "The new way of building a Hackintosh"

Beitrag von „fabiosun" vom 16. Dezember 2021, 15:21

[MPC561](#)

Excuse me first if I misunderstood from the google translation

My only merit was to make public in a clear way I hope the proxmox method that the famous youtuber girl proposed as in a kind of soap opera without ever giving help (without being paid I mean)

At that time my CPU purchased on December 6, 2019 did not have direct support from the Opencore memory manager, so I started studying a way to get OSX running on my machine (which had an additional complication, I was using an Nvidia TitanXp) and so all my initial work was done with High Sierra

The girl in question offers a paid service,

regardless she hates the hackintosh community which in some cases returns her with the same coin

For me she was just a noisy stimulus, to study the thing for myself and make it public for free (with all the limits of my lack of knowledge of the linux world)

🙂
