# "Der neue Weg" macOS zu nutzen oder "The new way of building a Hackintosh"

**Beitrag von „fabiosun" vom 16. Dezember 2021, 16:40**

She is doing that for money

I have done it for myself (I live with my job and hackintosh is a pleasure for me from many years)

I have then used Opencore as boot loader in Proxmox because I have discovered with it how to solve a problem of OVMF bios (scrambling text) and I have published a video for it

Opencore or Clover were mandatory to boot in OSX via ProxMox (a simple config plist in Kernel patches section...and also you can avoid VirtualSMC or fakeSMC kext to boot

Now I have left Proxmox Route because my 3970x (thanks to new memory manager) works perfectly both with Opencore (my preferred boot loader) and also with Clover till Monterey 12.01...waiting to a new Cloning adding in a future Clover514x 😉
