Opencore for Intel 11th generation

Beitrag von „Macko" vom 21. Dezember 2021, 12:38

So I finally managed to install Monterey on an Asrock Jupiter H470 with an i5 11600 processor.

But the system does not recognize the graphics and gave it only 7 MB, it does not recognize the processor, there is no sound or the Internet.

Can anyone modify EFI and config to those parameters please?

Special thanks MPC561 - use of the new OpenCore 0.7.6
