

OpenCore 0.7.6 Validation schlägt fehl

Beitrag von „Bob-Schmu“ vom 6. Januar 2022, 17:23

Zitat von Mentor

mit ist aber auch nicht besser, console läuft durch wird schwarz(blendet sich aus), nix passiert

Ich hoffe dir fällt es selber auf.

Navi 10 Series

Highest Supported OS: Current/Monterey (20)

Initial Supported OS: Catalina (10.15.1)

Currently, as of 10.15.1, Apple has finally added RDNA and Navi support!

Supported Cards:

- RX 5300
- RX 5300 XT
- RX 5600
- RX 5600 XT
- RX 5700
- RX 5700 XT
- RX 5700 XT 50th Anniversary Edition

Radson Pro:

- Radeon Pro W5500
- Radeon Pro W5700

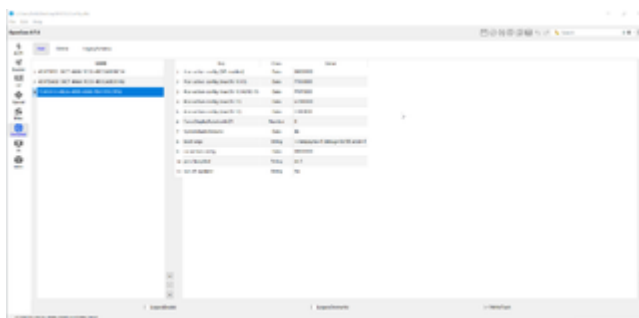

Note: Most Navi cards currently require the boot argument `agdp001=0`, to get proper display out.

Needed kexts:

- [Lilu.kext](#)
- [WhateverGreen.kext](#)

Important note for MSI Navi users:

- Catalina (10.15) installers and under currently have a VBIOS bug which crashes installers if an Navi card is present. This can be resolved by injecting `(00000000)` in your GPU's DeviceProperties with any value. See here for more details: [installer not working with 5700XT #30712](#)
- MSI's Polaris and Vega line are not affected by this bug.
