Hello Together,

i have build successful my Ryzentosh EFI.

My Specifications:

CPU: AMD Ryzen 9 5900X

RAM: 2x 8GB Corsair VENGEANCE DDR4 3000Mhz

Mainboard: Gigabyte Aorus B550 Elite V2 - F13 Bios Version

GPU: Powercolor AMD RX 580 - 8GB

Audio: Creative X-Fi Soundblaster 5.1 THX (USB)

My Ryzentosh is on MacOS 12.1 Monterey with OC 0.7.6

I use MacPro7.1 as SMBIOS

It works very well, but i have to optimize some things.

Whats not Working:

CPU Powermanagement

Sleeping mode

Bluetooth can not enable.

DRM is not working (Safari, Prime Video, Netflix)

Onboard Sound (I use a USB Soundcard works well)
