Unraid im MAC-Umfeld - Grafikbeschleuigung

Beitrag von „ozw00d" vom 18. Januar 2022, 15:00

1. Turn on ACS override (under VM manager)
2. Reboot without GUI
3. Run the following in terminal to isolate the cards from the OS
   ```
   echo 0 > /sys/class/vtconsole/vtcon0/bind
   echo 0 > /sys/class/vtconsole/vtcon1/bind
   echo efi-framebuffer.0 > /sys/bus/platform/drivers/efi-framebuffer/unbind
   ```

1. Find where your video card is in the new IOMMU groups
