

# Problem with booting macOS Monterey

Beitrag von „Elgzar2“ vom 20. Januar 2022, 19:26

Hello

I have posted before that i have a problem with my internet connection through my on board lan

the problem is in the lan card itself it isn't working because i don't use it for a long time

I have a wireless lan card that i use already to connect to the internet

The question is how can i use it to complete the installation

My system configuration is:

Amd fx6300

Rx 570 4gb

12 gb ram

You can see the attached image to know the wireless lan brand

Thanks
