"Der neue Weg" macOS zu nutzen oder "The new way of building a Hackintosh"

Beitrag von „fabiosun" vom 17. Februar 2022, 08:23

thank you Aluveitie for occasionally remembering my guide that was born just to bother morgolady a bit as at the time she talked about threadripper (TRX40) in her long video telenovelas

Thanks to gengik84 we also made available an app (VM Assistant) that helped to download an OSX recovery or a full installer and put it in the format required by Proxmox (Foxlet method)

In addition, an EFI was provided by the same app to start OSX

Pavo also approached virtualization with ProxMox following that guide (https://github.com/Pavo-IM/Proxintosh) and then moved on to creating an excellent guide with Unraid

So nothing new, current things have older roots.

my Proxmox guide, even if no longer updated, is followed and "copied" by many ...

personally I have not used the virtualization for more than a year because today there are no more old problems Since then with the vanilla installation, it is also possible to run many of the apps that in the past had problems in bare metal!
