[Zitat von Pi88no](#)

Here is my EFI I had to take out AirportItlwm.kext.. this is now over 15MB in size and altogether then too big to upload the zip here.

You can download the missing kext here:

https://github.com/OpenIntelWi...0_stable_BigSur.kext.zip

my OC is not quite up to date (0.7.6), but runs so with BigSur 11.6.4. without problems.
(PlatformInfo I have anonymized, see config.plist)

Many thanks for your help.

I will compare my sdt file and find out my mistake
