Grosul Hi. Macpeet never have create a final version for my laptop. You can find all versions here in the tread.

The problem is the new generation of audio ports (I don't know how to explain exactly) my English not the best.

Maybe MacPeet can tell you more about it.

In download center you can find one old Efi from my laptop too... But actually I have build a new working Efi that run much better than the Efi in download center. Much kexts and patches in the old Efi useless... With the new build the CPU temperature much better
