BOB-Schmu Danke Dir, da steht aber auch nur das die RX 580 funktioniert, aber nicht welcher Hersteller besonders

The only brands you should avoid with the Polaris series would be XFX, PowerColour, HIS and VisionTek as many users have had bootloader and macOS boot issues. Other users have found fixes/workarounds, though nothing consistent. This seems to be caused by having an odd VBIOS that doesn't communicate well with macOS and the only real solution is flashing another VBIOS, which is not ideal for most users.

Das wirst Du wohl überlesen haben.
