

macOS 13 VENTURA beta

Beitrag von „GoodBye“ vom 13. Juni 2022, 14:47

[securebootmodel.....](#)

Zitat von mathewgx

Problem solved with new opencore commits that allow AvoidRuntimeDefrag enabled.

AvoidRuntimeDefrag ist ja kein Problem mehr, evtl. noch NVRAM reset :

[Zitat von fabiosun](#)

with latest commit of Opencore (082) happens sometimes I have a black screen with signal before Opencore menu

I solve this behaviour entering in bios boot selection and choosing an EFI with Opencore 081, resetting Nvram and rebooting with OC 082 all is working well again.

I do know how debug this in a better way or if it is only a user problem!
