

# macOS 13 VENTURA beta

**Beitrag von „Phoenix85“ vom 8. Juli 2022, 10:15**

I have latest OpenCore and latest Lilu from today running on my EFI.

Thanks for checking MaxKernel.

Both AMD Kexts for Percentage Value and Power are on false within ProperTree and config.plist

Although I saw on Discord that Trulyspinach is on updating both kexts to work with Ventura Beta3

You have to follow also on Insanelymac to understand

It was a lot of fun to read how a dev justified the success of DF's work

[Phoenix85](#) maxKernel value seems to be fine

You should have to update your bootloader (and kext) with latest posted also here
