

[GELÖST] MSI Z690 Tomahawk D4 BIOS 1.7

Beitrag von „fabiosun“ vom 18. August 2022, 16:04

not an expert on that platform but if MAT1 this is correct to boot

SetupVirtualMap=False

then always if MAT 1 it is possible to boot fine with SetupVirtualMap=true and this EnableWriteUnprotector=true

with also RebuildAppleMemory to false value

I was very curious about this passage of Bios, forgive the many questions

My recent experience is on another platform even with quirks not recommended but working equally I have also tried it on intel platforms

Better always to follow configuration.pdf advice but sometimes others quirks configuration could work the same
