

In Arbeit

HacinTosh - Ryzen 5950X - MSI Meg Unify X570 + AMD GPU (?)

Beitrag von „Enaske“ vom 23. August 2022, 19:06

Hey,

just want report back to you. I am writing you out of my MacOS. So installation worked fine.

The only error it shown in MacOS was "To many memory installed"

Processor is shown as 3,4 GHZ 16 Core Intel Xeon W. So I assume everything works fine?

The M2 SSD is missing tho. Any way to add it to my System?

My normal SSD and my 2 HDDs are detected fine.

Anything else I have to check?
