## HowTo: Ryzentosh

**Beitrag von „fabiosun“ vom 4. September 2022, 16:12**

Thanks [ralf.](#) for this very accurate thread

I would like also to update something about adobe apps and Amd cpu

All method posted are now obsolete

It is possible to use adobe creative cc suite from 2019 to latest 2022 using a simple script named AMDFriend to patch intel MKL libraries without deleting or using original libraries or plug-in

I do not talk of older application ones, but the scripts could work well also for 2018 suite or older

AMDFriend script:

<https://github.com/NyaomiDEV/AMDFriend>

How it works:

<https://www.macos86.it/topic/5...r-library-patching-needs/>

some informations on mkl intel libraries problematic with AMD cpu:
