

macOS 13 VENTURA beta

Beitrag von „GoodBye“ vom 27. September 2022, 20:56

Had to CCC my NVME to the SSD which was build into the Laptop before and did not Start, cause is maybe the T2 Full Secure in Laptop was not active and the Beta 8 Install changed something.

Had to Clone actual State of Monterey anyhow, so installed Beta 8 from Monterey and now updating.....

No Grafik Glitches when moving Windows on this Maschine.

BT Mouse an Keyboard working now on same Preset Monterey and Ventura Beta 9 😊

Und ganz schön schnell 🏎️
