

Ivy-Bridge Installation {gelöst auf ivy-bridge installation {noch OC 0..6.9}}

Beitrag von „mutterhunt“ vom 15. Oktober 2022, 01:59

I tested with the standard-EFI for Ivy-Bridge from Olaria and added via OCAT in linux tocadd the Cryptex.Kext. Same result!

Was anderes: ich bekomme die Installation der EFI nicht hin, entweder ist das Boot image corrupt and is therefore not findable via rEFIND or it is the fact that Apple makes a APM header not a gpt. Even in my experimental OC on harddrive, I disabled through a guide the USB restrictions, no I get an inbootable EFI entry on OC menu. I'll try to recreate Monterey boot and installation for a second flash, let's see. Maybe my UEFI has a bad day....

i give it a second try!
