

macOS Ventura auf Skylake CPU - geht doch...

Beitrag von „Max.1974“ vom 14. November 2022, 08:11

Hi [mykind](#) im have the same Motherboard like yours.

Im Change serial board information, and prepare a detail DSDT and SSDT usb ports compiled to not gave problem with energy controller.

I hope help you.

Im not sure, but maybe you need use specific boot-args to your RX 580 (like `agdpmod=pikera`, if needed).

I recomend you type disable igpu igfx (intel igpu in Bios).

I have 3,4 Ghz on information. Same i7 intel 6th Gen.

Good Luck!!

EFI FOLDER

Opencore MOD No ACPI 0.8.6

(Windows OS not injection).

Excelent to DUAL BOOT

[EFI SKYLAKE GA Z170 XP SLI OPENCORE.zip](#)
