

Asus B550 Bootloop

Beitrag von „fabiosun“ vom 17. November 2022, 17:53

a full ioreg and a ACPI path would be better

but if you like try it with your device path and spoof in Device properties

EDIT:

from terminal:

Code

1. fabio@Mac-Pro ~ % xattr -c /Users/fabio/Downloads/HackCheck\ 2.app
2. fabio@Mac-Pro ~ % chmod +x /Users/fabio/Downloads/HackCheck\ 2.app
