

# x299 pro/se freeze in Monterey or Ventura

Beitrag von „ozw00d“ vom 29. November 2022, 14:17

for me, in my case, this is in another SSDT, which I also use for Ethernet.  
But I won't share it.

for this you need add some code like this:

Code

```
1. Method (_DSM, 4, NotSerialized) // _DSM: Device-Specific Method
2. {
3.   If ((Arg0 == ToUUID ("a0b5b7c6-1318-441c-b0c9-fe695eaf949b") /* Unknown UUID */))
4.   {
5.     Local0 = Package (0x08)
6.     {
7.       "kUSBSleepPowerSupply",
8.       0x13EC,
9.       "kUSBSleepPortCurrentLimit",
10.      0x0834,
11.      "kUSBWakePowerSupply",
12.      0x13EC,
13.      "kUSBWakePortCurrentLimit",
14.      0x0834
15.    }
16.    DTGP (Arg0, Arg1, Arg2, Arg3, RefOf (Local0))
17.    Return (Local0)
18.  }
```
