

Radeon RX 5700 XT oft schwarzer Bildschirm

Beitrag von „fabiosun“ vom 19. Dezember 2022, 15:59

[Thunder43](#) forgive me I am a donkey

you need of a kext from Monterey and greater

add it in your kext folder and declare it in your kernel/add section of config.plist

EDIT:

I assume that you have updated all main kext and boot loader in your initial EFI and are using the config plists sent
