AMD Radeon 6650 XT, 6950 XT und 6900 XTXH ohne GPU-ID Spoofing

Beitrag von „utopia" vom 7. April 2023, 16:17

I just fixed it :D, I had two unnamed bridges in my path, it wasn't showing on Windows but from IORegestryExpolorer I could see its full path:
IOService:/AppleACPIPlatformExpert/PCIO@0/AppleACPIPCI/GPP8@3,1/1OPP/pci-bridge@0/1OPP/pci-bridge@0/IOPP/GFX0@0

from this, I was able to edit the SSDT to match the path (credit to @etorix)

Also: I made a new geek bench test on the GPU with the spoofing and I got the exact same result as your KEXT, both were very low on OpenCL
