Why and for what Do you need AMDFriend? (sorry for this simple question)

Usually people need to have on AMD CPU some program working well Aas Adobe program or Autocad or Maja or Matcad or Matematica.....and i could go on with the list 😊

if i have to patch ie Photoshop i use terminal and i execute:

Code

1. amdfriend --in-place --sign --directories /Applications/Adobe\ Photoshop\ 2024/Adobe\ Photoshop\ 2024.app

so the script patch all MKL libs not compatible with AMD CPU

So do you need something similar to this?

EDIT if you fail to download it and installing it as the instructions posted in github help to do you can use the release version:

<https://github.com/NyaomiDEV/AMDFriend/releases/tag/v1.0.2>

and in this way no need to use node js or all the procedure as instructions says to do
