

HP Compaq Elite 8100 mit macOS?

Beitrag von „gene-x“ vom 23. Februar 2024, 13:54

Benutzt du [OCAT ?](#)

Das kann dir diverse Fehler auch automatisch korrigieren, die Kexte Updaten etc.

Ich habe aber auch mal beim suchen gefunden das die alten Kisten mit dem neuen OpenCore nicht so richtig laufen....

Da muss du halt mal Google bemühen, es gibt auch noch alte Anleitungen für den aber auf Grundlage von Clover und nicht OpenCore.

Suche halt mal:

clover hp8100 legacy

auf Google....

You can read and follow my [HP 8200 guide](#) and the install process will be basically the same if you are installing High Sierra. All the graphics cards mentioned there will work with your 8100.

There are no guides for the 8100 because the 8200 or 8300 are newer models from HP that are much better choices. The costs of refurbs are about the same for each so there's no reason to go with the 8100. If you want to use Mojave, the 8300 with an HD4000 CPU is the best choice. The HD4000 igfx works better than even the newer UHD 630 graphics on the latest CPUs. No discrete graphics card is required. You would use the DP output for this.

You could try using a GT 710 card with your 8100 and install Mojave. I'm not sure how well it will work but it's a given that you will have to boot legacy to make it work at all. If you do have success make sure to write a guide about it.
