If you overlook the fact that your system (as well as mine) consumes a lot more energy than the most modern apple systems, a year from now if you can still find it add another 6900 and you'll be at the top for a couple more years.

He took the wrong MB for that.

The ASUS ProArt Z890-Creator WIFI would have been the better choice.

This has 2x PCIe 5.0 x16 which can be divided into x8/x8.

It wouldn't have made any difference to the price.

The ASUS ProArt Z890-Creator WIFI also has 2x Thunderbolt 5 / USB4 v2 80Gb/s + 1x Thunderbolt 4 / USB4 40Gb/s + 1x RJ-45 10GBase-T, Marvell what is supported by macOS.
