

Eignung von Intel Arrow Lake CPUs mit z890 Boards für Hackintosh

Beitrag von „fabiosun“ vom 25. Juli 2025, 17:22

[Bob-Schmu](#) i don't know if in Maldon system all is working well (i know for sure two ethernets on board worked well also in Asusx870e Proart i used for my AMD

I would prefer always Hero mb if the slot placement is similar to mine

I will search to understand which chipset are Proart z890 thunderbolt ad USB4

it could be my "last" intel/hack system if performance is confirmed!

[Michael1965](#)

on my x870E hero i have 5 nvme slot but if i fullfill my system with two gpu i loose one of it

(not tested because i have two GPU, 4 Nvme and 4 sata SSD disks) but hero manual is pretty clear in this subject

in DaVinci Resolve loosing 16x for gpu to 8x is not a big drama so it is a limited problem for me

However i am very curious about some your benchmarks whern your system will be ready 😊
