

# WWDC 2025, macOS 26 & Hackintosh

Beitrag von „schrup21“ vom 10. September 2025, 16:56

Bei mir verlief das Update zum RC erwartungsgemäß normal:

The image shows a macOS update notification card for macOS Tahoe 26. At the top left is a circular icon with a blue and white landscape. To its right, the text reads "macOS Tahoe 26" and "26.0 — 2,83 GB". To the right of this are two buttons: "Heute Nacht aktualisieren" and "Jetzt aktualisieren", followed by an information icon (i). Below this header is a paragraph: "macOS Tahoe introduces a stunning new design and Apple Intelligence features, along with delightful ways to work across your devices and boost your productivity." This is followed by four sections, each with a bold heading and a paragraph of text: "Design" (The new design, featuring Liquid Glass, gives Mac a fresh new look that's more expressive and delightful yet instantly familiar.), "Apple Intelligence" (Unlock new ways to communicate across languages with Live Translation, tap into new intelligent actions in Shortcuts, combine favorite emoji together with Genmoji, and explore more options as you create images in Image Playground.), "Continuity" (Get even more ways to work seamlessly across devices with the all-new Phone app and Live Activities on Mac.), and "Productivity" (Discover new features for Spotlight, Shortcuts, and Messages to enhance your productivity and how you communicate on Mac.). At the bottom of the card, a line of text states: "Nach dem Laden dauert die Installation des Updates ungefähr 20 Minuten. [Weitere Infos ...](#)"

Btw. wegen AppleHDA - mit MyKextInstaller kann man das auch wiederbeleben
