macOS Installation auf ASUS B550 CREATOR mit Ryzen 7 3700X & RX 5700XT

Beitrag von „fabiosun“ vom 22. Oktober 2025, 17:52

Sorry but i have to write in english and i do not understand well your problem

If you are doing a clean install in a new disk or you are updating a previous osx version

1) in tahoe whatevergreen.kext must be disabled in the first steps of tahoe installation/update*

2) opencore and kext have to be updated

3) AMD kernel patches have to be updated

https://github.com/AMD-OSX/AMD_Vanilla

for 1) you can use a modified kext done by royalgrapx (AMD Discord server) you can find searching on github

<https://github.com/Carnations-Botanica/WhateverGreen/actions> **

added Whatevergreen kext i use and disclaimer

** vit didnt merge the action because code is not good for all and lilu..but it works
