

# macOS 26 Tahoe auf den Hackintosh

Beitrag von „fabiosun“ vom 12. Februar 2026, 18:51

[ST3R30](#) we (amd users) had many other problems 😊

AppleVTD is luckily (or unluckily) not present for us in our BIOS or IOREG

On macOS86.it some users modified AppleIGC and till sequoia it worked better than other Kexts (not perfect and i discover only in recent times this not perfect functionality (some strange lags i mean) when i used an USB supported ethernet adapter, and also by now with realtek 5gbE ethernet which work perfectly in my system
