

# Funktioniert nicht (Gigabyte X570) - benötige Hilfe

Beitrag von „fabiosun“ vom 16. April 2026, 20:10

[Norderstedter](#) your BIG Sur EFI has two ethernet kexts (one old for Intel another for realtek ethernet card)

your motherboard has only one ethernet if i am not wrong

I would also update all your AMD kernel patches if you want to use OSX greater than big sur

also opencore and all your kexts must be updated
