Lenovo IdeaPad U510 Installation Anleitung 10.9.3/4

Beitrag von „zorangajic“ vom 23. November 2013, 01:17

Hi sorry for writing in english but unfortunately beside learning german language for 5-6 years in school I must say that have not learned anything, so having that in mind you can imagine how smart I could be? so especialy for the Fab, can someone tell me how to install os x maverics on my lenovo u510 i5 without ssd in it, I have managed to make the basic installation, with myhack and the files provided, successfully got to the start up with disabled graphics with command -x GraphicsEnabler=No IGPEnabler=Yes IGPlatformID=01660003 but then when I install the kexts system crashed on next start up, I have install all of the kexts that I have found in the dropbox at once, can someone told me what I was doing wrong, it is my first time hackintoshing so there are too many things that are new to me, thanks 🙏🙏
