Disabling SIP in Ozmosis (El Capitan DP4)

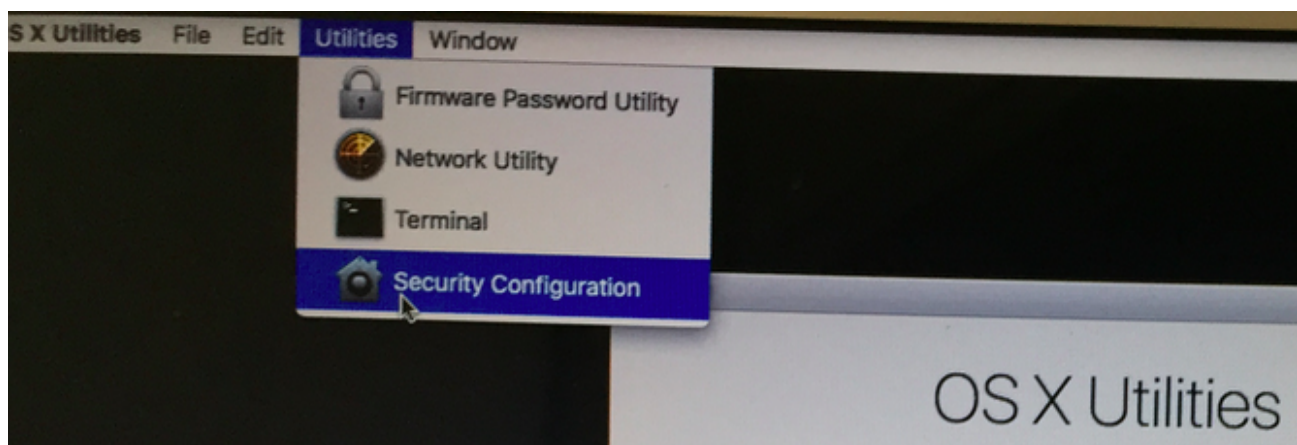

Beitrag von „nikoZ“ vom 1. August 2015, 15:41

Hello everyone!

It's there a way we can disable Apple [System Integrity Protection](#) module in latest El Capitan update?! I would like to. If it's has been already discussed on forum, I appologise, I didn't find anything.

Thanks.

Edit by Admin Please no foreign links

EIDT: Got it! You have to boot into Recovery partition and disable protection which allows loading of unsigned kexts.

You mean uncheck Enforce [System Integrity Protection](#) and after apply!!!

Beitrag von „nikoZ“ vom 1. August 2015, 23:08

Yes, you're right! 😊

Beitrag von „Gollum“ vom 4. August 2015, 10:14

That was exactly what I needed, thanks!

Genau das hat mir gefehlt, jetzt läuft auch die AppleIntelE1000e.kext wieder.
