My hackintosh restart instead of shutdown

Beitrag von „rud@ye“ vom 13. Oktober 2016, 21:10

hi every one

I have a GA-Z97X-GAMING GT with a GTX970 right now and I have big problem in 10.12 sierra when I turned off my hack it will not shut down the display goes into veil (no signal) and hack stays on

I had no problem with el capitan

When do I start in nv_disable = 1 it Shut Down normally 😄

but when do I start in nvda_drv = 1 it Restart 😞😞

the screen switches to veil (no signal) the hack reboot and returns to the menu clover

I installed the nvidia good WebDriver

help 😞😞😞

I believe you use clover right? Do you use a Patched dsdt for your System?

BTW: Welcome to our Forum! 😊

Welcome to the forum... 😊

Are you using the "nvda_drv=1" boot argument or the NvidiWeb entry?

Code

1. <key>SystemParameters</key>
 2. <dict>
 3. <key>NvidiaWeb</key>
 4. <true/>
 5. </dict>

I use the Nvidia Web entry, here is my config plist

Beitrag von „griven“ vom 18. Oktober 2016, 23:39

I guess it's a webdrivers issue which will hopefully be fixed soon...
