

Python script for generating an SSDT to inject USB ports

Beitrag von „derHackfan“ vom 15. August 2017, 09:42

Im Anhang findet ihr ein Script von Pike R. Alpha.

A script that will generate an SSDT for enabling USB ports on Hackintosh.

- Allow all ports
- Configure which ports to show in script (For guide creators)
- Do we need to configure HSxx.DPxx and SSxx.DPxx?
